The Next-Gen EFB Solution for Modern Flight Operations

Talora brings Navigation Data, charts and operational workflows together in one intuitive EFB platform – designed for modern flight operations where clarity, reliability and integration matter most.

Talora is a next-generation Electronic Flight Bag application designed to support commercial aviation operations through a modern, efficient and highly configurable digital interface.

The platform brings together operational content, flight planning tools, performance data and workflow support in a single, streamlined environment optimised for flight deck and airline operational use.

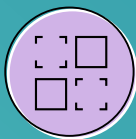

Key Benefits of Talora

Pilot-Centered Design

Designed with pilots in mind to ensure intuitive workflows and minimal distraction. Enhances situational awareness and reduces workload in every phase of flight.

Configurable. Modular. Scalable.

Easily adaptable to your operational needs with a flexible, modular architecture. Scales seamlessly from small fleets to large, complex operations.

Smarter Navigation Charts

Advanced Navigation Charts that highlight what matters most, when it matters. Clear, dynamic and optimized for fast decision-making in the cockpit.

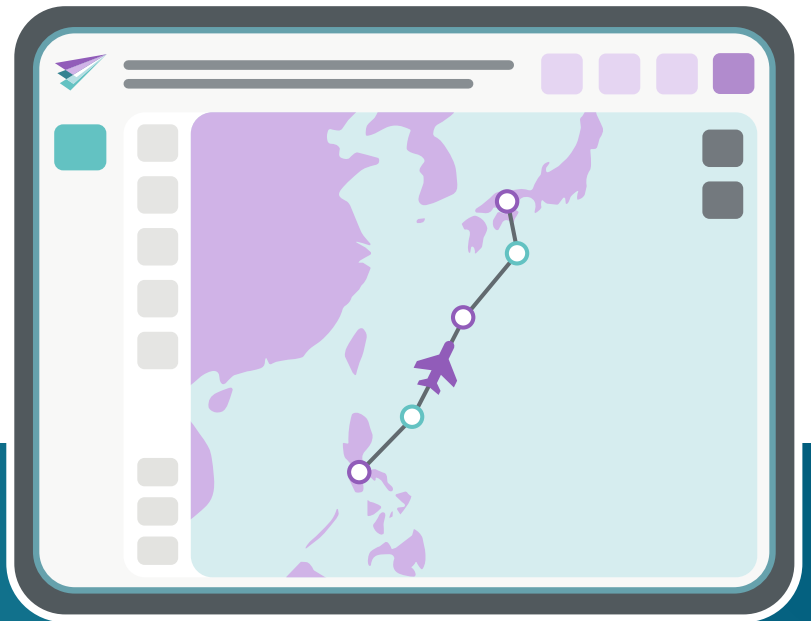

All Aircraft Types Supported

Built to support the full spectrum of aircraft – from general aviation to commercial fleets. One solution that fits diverse operations without compromise.

A Simple and Intuitive UI

A single, defining principle underpins the User Experience philosophy of Talora: to make the inherently complex operational environment of aviation feel intuitive, predictable and effortless. Every interaction – from the simplest gesture to the most advanced workflow transition – is intentionally crafted to reduce pilot workload, strengthen situational awareness and create an atmosphere of calm, structured control within a high-pressure operational context.

One Subscription = Global Database

A single subscription gives you access to a comprehensive, worldwide aviation database. Always up to date and consistent across all regions and operations.

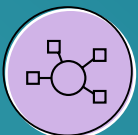

Enhanced A424 Data and Integrated NAVLOG

High-quality A424 data enriched with additional intelligence for better usability. Seamlessly integrated NAVLOG ensures efficient planning and in-flight execution.

EASA DAT Type 1 Certified Data

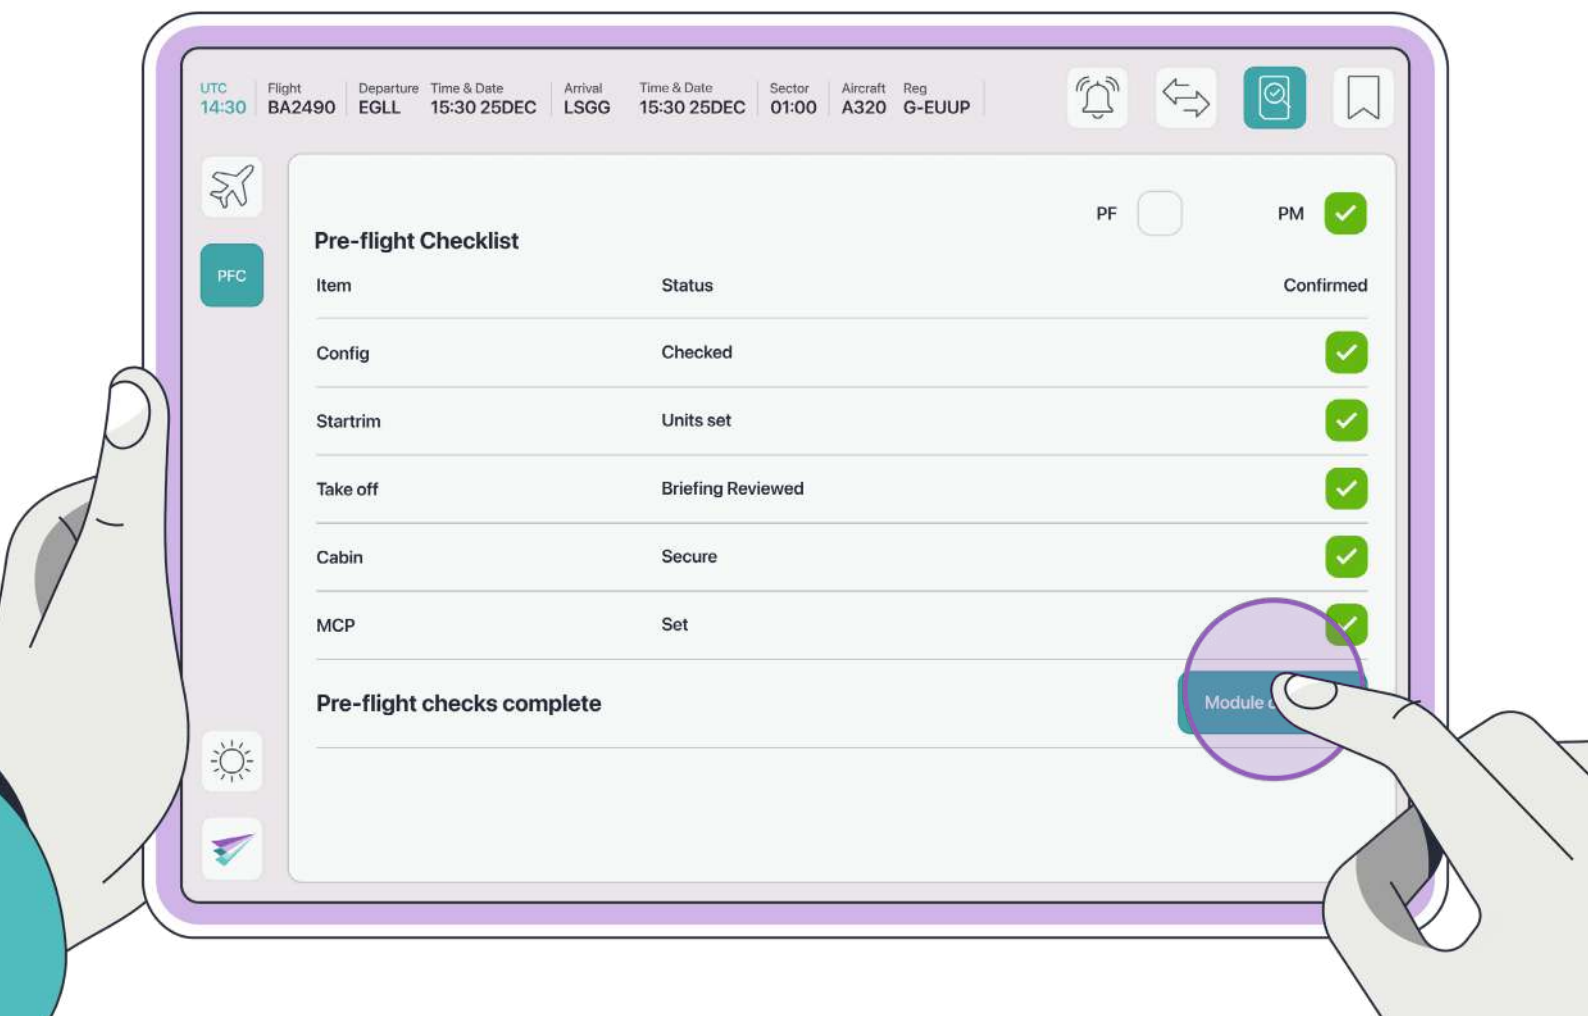

Fully compliant, certified data meeting the highest EASA standards. Ensures reliability, safety and regulatory confidence in every operation.

Seamless Connection to All Flight Planning Systems

Easily integrates with all major flight planning systems and workflows. Enables smooth data exchange and eliminates operational friction.
